The Planets in our Solar System

There are eight planets in the solar system and they all go around the Sun. Our planet is called Earth and it goes around the Sun every 365 days. That is one year! Earth also has a moon. We can live on Earth because there is air and water here. Most planets and moons do not have these.

The nearest planets to the Sun are called Mercury and Venus, then we have Earth. Some planets are very far from the Sun. The furthest are called Uranus and Neptune.

The biggest planet is called Jupiter. It is 11 times larger than Earth and has more than 90 moons! Saturn is amazing, too. This planet has 146 moons and a big ring around it!

The other planet is called Mars and it has the highest mountain in the solar system. It is called Olympus Mons and it is three times higher than Mount Everest!
